Chapter: 5	Configuration of Flexible Public CLI Number	5
Chapter: 6	Execution	6
Chapter: 7	Termination	7

General

For generic extensions, there is an option to use an alternative Flexible CLI number set either by I/O-command, by end-user procedure or through CSTA service request, for example the mobile phone number in the PLMN, or fix PSTN subscriber number, representing the generic extension (primarily for RXNs).

Prerequisites

Common Public Number

To use a Common public number, it must be configured. See *Common public directory number OPERATIONAL DIRECTIONS*.

An Extension Group Number

To use extension group number, it must be configured. See *Group Hunting, GH OPERATIONAL DIRECTIONS for PBX groups and Automatic call distribution, AC OPERATIONAL DIRECTIONS for CTI/ACD groups*.

Aids

I/O terminal.

References

These Operational Directions refer to the following other commands and operation directions:

Command descriptions:	<i>extension_option</i>
Operational Directions:	<i>CSTA Server Phase III</i> <i>CSTA Server Phase I</i>

Configuration of Flexible Public CLI Number

To use a number in the PLMN/PSTN, you must use command `extension_option` to set the number.

Execution

When the user activates the Flexible public CLI function (procedure *FC*), the following approved numbers can be used for the Calling Line Identity when calling a public destination.

- A restricted number, procedure *FC*0#
- Common public number for the PBX or LIM, procedure *FC*1#
- A number in the PLMN/PSTN set by command `extension_option`, procedure *FC*2#
- An extension group number (PBX/CTI), procedure *FC*3<group number>#

When the user deactivates the optional Flexible public CLI number function (procedure #FC#), the user's own directory number will be displayed as the calling/connected party number.

The functionality works over the CSTA interface if the application has implemented it, and a CSTA event is sent when the Flexible public CLI number is set or changed through a command, procedure, or CSTA request.

Termination

If any exchange data will be changed, a dump to backup media must be performed. See the operational directions in the *Administrator User's Guide*.
