## GENERAL

This document contains the operational directions for the Dial by name feature.

### 1.1

#### GENERAL

This feature allows users, with DBC 203/213/ and DBC 223 and DBC 225 telephones, to get the telephone number from the Dial-By-Name database by typing the name on the DTS keypad conforming to the ITU-T specifications.

The searched number, with the name and the auxiliary information, if any, is displayed on the DTS. Once the searched name and its additional information are displayed, a call can be initiated by pressing a soft-key, or the user can scroll up or scroll down through the stored names of the Dial by name data base.

This feature is handled by soft-keys.

Names are entered by command *name -i*, with the number and, optionally, the auxiliary information. Entered names are alphabetically arranged in the Dial by name data base each time a new name is entered.

Command *name -e* is used to delete names from the Dial by name data base.

Command *name -p* shows the names, numbers, type of data base number and auxiliary information of the users stored in the Dial by name data base.

--

**5****PROCEDURE**

When the system is set up to have the Dial-By-Name feature available, names should be initiated for all the desired individuals in the system.

After this, the feature can be used from any DTS of the required type.

## 6 EXECUTION

### 6.1 INITIATE A NAME IN THE DIAL BY NAME DATA BASE

#### General

It is not allowed to initiate twice the same name for the same number, but it is allowed to initiate different names for the same number. The procedure described below must be executed as many times as names are required.

#### Prerequisites

The Name identity feature must be loaded in the system.

#### Execution

1. Key the command *name -i* using parameter *--dial-by-name-also* or *--dial-by-name-only* to initiate the name in the Dial by name data base.  
See the command description for *name*.
2. Key the command *name -p* with parameter *--dir to verify* that the initiation has been executed  
See the command description for *name*.
3. Key the command *name -p* with parameter *--dial-by-name-only* to verify that the initiation has been executed  
See the command description for *name*.

## 6.2

## PRINT THE NAMES FROM THE DIAL BY NAME DATA BASE

**General**

With the Name identity feature, the names are stored in the Name identity data base. With the Dial by name feature, the names are also stored in the Dial by name data base. The information is not the same in these two places. Different parameters must be used and the printouts are different in both cases.

**Prerequisites**

-

**Execution**

1. Key the command *name -p* with parameter *--dial-by-name-only* to get the names from the Dial by name data base.  
See the command description for *name*.

## 6.3

## REMOVE A NAME FROM THE DIAL BY NAME DATA BASE

**General**

A name from the Dial by name data base can be removed:

- By using the command for the Name identity feature . The name is removed from the Name identity data base and also from the Dial by name data base.
- By deleting the individual. The name is removed from the Name identity data base and also from the Dial by name data base.
- By using the parameter *--dial-by-name-only* for the Name identity feature. The name is only removed from the Dial by name data base.

**Prerequisites**

-

**Execution**

## 6.3.1

## DELETION OF NAME IDENTITY

1. Key the command *name -e*.  
See the command description for *name*.

## 6.3.2

## DELETION OF INDIVIDUAL

1. Delete the individual by using the corresponding command: KSEX, EXTEE, OPER, GHGME, or extension -e.  
See the corresponding command description.

## 6.3.3

## DELETION OF ENTRY IN THE DIAL BY NAME DATA BASE

1. Key the command *name* with parameters *--dial-by-name-only* to remove the entry in the Dial by name data base.

See the command description for *name*.

## 7 TERMINATION

If exchange data have been altered and no more commands are to be issued, perform a dump on the backup media. key command *data\_backup*.
