GENERAL

This document describes the Choice of language functionality.

1.1

CHOICE OF LANGUAGE

The purpose of the Choice of language feature is to allow every user to select the language in which the text messages appear in the display of the DTS/MX-ONE IP telephone.

Once a language has been chosen, all text strings will appear at the DTS/MX-ONE IP telephone display in the selected language until another language is chosen. There are up to ten available languages to choose from.

When initiating a DTS/IP terminal (MX-ONE IP telephone or not), the exchange administrator can select the initial language for it. If no particular language is specified, the exchange language will be used. The language can later be changed at any time by command or procedure.

1.2

LIMITATIONS

- Choice of language can be used by any DTS extension with a display.
- Choice of language can only be used in MX-ONE IP telephones with display capability.
- For an extension it is only possible to change the language from the own extension or console.

1.3

GLOSSARY

For a complete list of abbreviations and glossary, see the description for *ACRONYMS, ABBREVIATIONS AND GLOSSARY*.

2 FACILITIES

2.1 USER INTERFACE

To select a new language for a DTS/IP telephone terminal, the user must dial the following procedure:

***FC*L#**

FC is the function code for Choice of language and **L** is a number between 0 and 9, where each number represents a unique language.

The Choice of language procedure from an extension must be invoked when the telephone is idle or when the user is receiving dial tone.

After dialling the procedure from an extension, the user will get a confirmation tone (stated by a market dependent parameter) and a message in the selected language will inform that the procedure was successfully executed. If the procedure is rejected, the user will get a failure tone (stated by a market dependent parameter) and a no progress message in the original language will be displayed.

2.2 ADMINISTRATION FROM AN I/O TERMINAL

The administration functions that can be carried out through the I/O terminal are the following:

- Selecting the language for any DTS/IP terminal when initiating it. The selected language can be one of the ten available ones or the exchange language.
- Note:** Although the exchange language is considered and treated as if it were a separate one, it is just an alias to one of the ten languages (0 to 9).
- Changing the language for any DTS/IP terminal once it is initiated. The same as above applies.
- Printing the language choice for DTS/IP terminal.
- Changing and printing any text string for any of the ten available languages.
- Changing and printing any simplified diversion message text string for any of the ten available languages for the Operator Assistant.
- Changing and printing the data of any of the eight special characters for any of the ten available languages.
- Setting the exchange language to any of the ten available languages.

2.3 CAPACITY AND RESTRICTIONS

- Choice of language function can only be used by DTS extensions with display capability: alphanumeric display, graphical display or full display.
- Choice of language can only be used in MX-ONE IP telephones with display capability.
- Displayed text strings messages can be up to 20 characters long for DTSes and IP terminals. These maximum lengths include blank characters.

- Up to 10 different languages can be used (from extensions, since the languages are identified by a 1-digit parameter). Circa 20 different languages can be supported in the system, but not used simultaneously.
- Eight special characters can be defined per language for DTS extensions with version D3 or older.

3 HARDWARE

No extra hardware is required for this feature.

4 SUMMARY

Choice of language is a function to select the language in which text strings should be presented in the display of DTS/MX-ONE IP telephones.
