## GENERAL

Special purpose extension denotes an extension with one or more of extra functions like alarm extension, direct connection (direct hot-line), delayed hot-line, automatic answering, and master extension.

**Alarm extension** means that up to seven calls can be connected simultaneously towards the alarm extension instead of receiving busy tone.

**Note:** Access to the conference and intrusion facilities decreases when an alarm extension is initiated. For each alarm extension 8 of the total 32 conference or intrusion possibilities are reserved.

It is highly recommended to avoid the initiation of Personal Number for an alarm extension.

**Direct connection, hot line** extension means that when the user lifts the handset a call is made immediately to a predetermined direct connection number. The direct connection number can be a directory number, a PBX operator number, an external number, a common abbreviated number, or a procedure.

The feature **delayed hot-line** gives the users the possibility to have the telephone initiated as a hot-line and still be able to use it as a normal telephone.

After lifting the handset the user has the following two options:

- If dialing within the delay time, approximately 4 seconds, the user can use the telephone the normal way.
- If the user does not dial within the delay time, the call is automatically set up against a predefined number.

An **automatic answering** extension, is an extension that switches to speech state immediately a call arrives. The extension normally lacks the clear signal. The extension can be used as a loudspeaking telephone, a voice message equipment, and a dictation unit. The voice message function requires specific hardware.

A **master extension** is an extension which is permitted to order group do not disturb, to bypass an extension with group do not disturb activated, or to order follow me of an internal group hunting group.

## 6 EXECUTION

### 6.1 INITIATION OF EXTRA FUNCTIONS

#### **General**

The alarm extension function can only be initiated for analog extensions, integrated DECT extensions, and for Additional Directory Numbers (ADNs) on DTS extensions.

An alarm extension is not to have any personal number list initiated.

The automatic answering function can only be initiated for analog extensions.

The features direct hot-line and delayed hot-line cannot be initiated for generic extensions. Generic extensions cannot be initiated as master extension.

The features direct hot-line and delayed hot-line cannot be initiated at the same time.

#### **Prerequisites**

The extension must be initiated.

#### **Execution**

Key the command *SPEXI*.

Key the command *SPEXP* to verify that the function has been initiated.

### 6.2 ERASURE OF EXTRA FUNCTIONS

#### **General**

One or more of the extra functions is to be erased.

#### **Prerequisites**

---

#### **Execution**

Key the command *SPEXE*.

Key the command *SPEXP* to verify that the function has been erased.

### 6.3 PRINTOUT OF DATA FOR EXTENSION WITH EXTRA FUNCTIONS

Key the command *SPEXP*.
