MiVoice Office Application Suite
Release 5.2 - March, 2021

Call Reporter Quick Reference Guide

The following guide is designed to provide an introduction to the call reporting features of the MiVoice Office Application Suite solution.

Reports

The Reports page provides access to run reports on any internal or external calls. Depending on the license applied to the system, the following report types can be accessed:

- Call Lists
- Status Lists (DND & ACD)
- Grouped Reports (by Extension, User, Agent, Hunt Group, Trunk, DID & Start Time)
- Configuration Lists (Extensions, Agents, Trunks & DIDs)

My Reports
Each user has a list of pre-configured reports to use

Shared Reports
See reports that have been shared by users

Schedules
Set up schedules to run reports automatically and deliver by email or network share

Date Range
Control the Date range over which the current report is run

Filter
Change the filter to restrict the reports to specific calls

Apply Button
Use this button to apply date range, or to re-run the report

Categories
Reports are grouped into categories to make them easier to find

New Report Button
Use this button to create a new report

Edit Menu
Pressing the more button displays all options for a report

Play Button
Play back a call when using MiVoice Office Call Recorder (License and permissions dependant)

Page Control
Use to navigate through the records returned by the report

Save / Print
Save or print the report that is open

> Any report or column that is not licensed for use will be indicated with a padlock symbol.

Running Reports

Each user has their own copy of the default reports to run. These can be modified, added to, or deleted without affecting other users on the system. The reports are grouped together in categories on the left side of the screen. To run a report, press the play icon to the right of the report in the list. The report will appear on the right side of the page using the default filter and date range that were saved against the report.

A report may be presented across multiple pages, when this happens the page navigation buttons can be used to move through the report. If the report is a grouped report, the last row will show the totals of each column where applicable. Reports can be saved in Excel, PDF or Word format or they can be printed directly from the

page.

Segmented Reports

When a call is logged to the database, a new call segment is created each time the call rings or is answered by a different device on the telephone system. A single external call can have many call segments. It is important to understand this when looking at call reports and evaluating call totals. For example, if looking at a Segmented Call List, a call will appear multiple times, once for each destination it was delivered to.

For more information on call segmentation and how it applies to different Reports/Templates, please refer to the product help document.

Report Types (Lists / Grouped)

There are two different types of reports that can be run; lists or grouped reports. Lists can provide details of individual calls or call segments. Grouped reports provide aggregate columns that include totals, averages and minimum/maximum values. These reports provide a way of analyzing call traffic and how quickly calls are being answered.

Date Range & Filtering

The date range and filter can be used to select which calls are included in the reports. Any changes to a filter or date range require the report to be re-run using the 'Apply' button. The system will cache reports that have be run before, if the report has not been edited and the date range/filter has not changed, a cached version of the report will be loaded to improve performance.

> The more data that is being included in the report, the longer the report will take to run and display on the right of the screen. It is beneficial to limit the data by using filters and date ranges so that it only includes the data required. A maximum of 5000 records will be displayed.

> If the number of rows in the report exceeds 1000, the export option will not be available. To export more records than this you must use Scheduling.

Shared Reports

Reports can be shared so that other users can see and modify them. When a report is shared, a shared copy of the report is created, leaving the original in the 'My Reports' section. Shared reports can be modified by any users with permission to access them.

> For a report to be used in a schedule, it must first be shared.

Adding / Editing Reports

Every report in the 'My Reports' section is specific to the user logged in and can be added to, edited, or deleted as required without affecting other users. When editing a report, the form pictured below will be displayed.

Columns
Choose columns visible on the report and control how they will be displayed

Filters
Select the default filter that will be used each time the report is run

Sorting
Select the sorting options for the report

| About the Report | Columns | Filters | Sorting | | Save |

Report Template

Call Data - Call List (Segmented)
Call Data - Call List
Call Data - Calls by Account Code
Call Data - Calls by DDI
Call Data - Calls by Extension
Call Data - Calls by Hunt Group
Call Data - Calls by Start Time
Call Data - Calls by Telephone Number
Call Data - Calls by Trunk
Call Data - Calls by User
Call Data - Unreturned Lost Calls
Config - ACD Agent List
Config - DDI Number List
Config - Device List
Config - Trunk List

Enter a name to help identify this report

Call List General (Non-Segmented)

Select or create a category to assign this report to

Call Lists

Description

Default Non-segmented Call List Report

Templates
Select a template to use for a report. The template controls the data to look at and how the report should be grouped

Category Selection
Select an existing category a report will be displayed in or enter the name of a new one

Save
Save any changes made to the report. If you click away before pressing Save, the changes will be lost

Report Templates

Each report is based on a report template. A report template defines what data is being reported on (call or configuration), how the data is to be grouped (By Extension, By Agent, Not Grouped etc..) and which columns are available to choose from. Changing the template of an existing report will change the available columns, this in turn will set the chosen columns back to default.

Report Categories

Reports are saved into different categories to make them easier to find in the user interface and to group together similar reports. The category a report is saved in can be selected from the list or a new category name can be entered.

Adding / Removing Columns

Each report comes with default columns added. A list of the available columns to add to the report appears on the left side of the 'Columns' tab, split up into categories to help locate the required column. To add a column to a report, left click on it. Chosen columns can be re-ordered by drag and drop or removed using the cross icon.

If the report is grouped, the column the report is grouped by will appear in blue. Grouped by columns cannot be removed from a report.

Please refer to the product help file for detailed information of each column.

Column Options

The options available to configure will be different depending on the column type. The 'Header' is the name that will be displayed for this column in the report. These are defaulted to a shortened variant of the column name but can be overridden by the user (the column name appears as a tooltip if you hover over it in an open report).

Where applicable, the 'Display as' option controls the format of the data shown in the report.

> 📑 Changing the format of a grouped column can change the way the report is grouped. For example, if a report is grouped by 'Start Time' changing the format from 'Date and Time' to 'Time Only' will group multiple days calls into a single row based on time of day.

Filters

Select the default filter and date range to be assigned to a report when it is opened. This can then be overridden once the report is run using the date range and filter dropdown boxes on the report viewing page.

Sorting

Select the sort order for the report. Reports can be sorted by more than one column if required, but the sort direction (ascending or descending) will need to be the same for all sorted columns.

Scheduling Reports

The optional scheduler can be used to automatically run reports on a regular basis and either deliver them by email or save them to a network share.

List Of Configured Schedules
See a list of configured schedules for all users on the system

Edit Menu
Edit, delete or run a schedule using the associated menu

History
A history of scheduled tasks that have run, how long they took and whether they were successful

Using Schedules

The 'Schedules' page shows all schedules that have been configured on the system, regardless of the user that configured them. Any user with permission can add, edit or delete a schedule. The 'Scheduled Task History' table shows when the schedules have run and whether they were successful or not. Schedules can be run manually as a 'one-off' irrespective of the recurrence settings, by selecting the 'Run Now' option from the menu.

Shared Reports & Filters

Only shared reports and shared filters can be used in a schedule. This is because schedules are a system-wide concept that can be edited by anyone. Therefore the reports and filters being added to a schedule need to be visible to everyone.

Recurrence

The 'Start Date' and 'Start Time' for a schedule is used to work out when a schedule will first be run. After this, the configured 'Recurrence' will be used to work out when the next schedule should be run. The table below shows the different options available for recurrence:

Recurrence	Description
Minute	Run every 'x' minutes (minimum 15 minutes). Select the days of the week to run and between what times.
Hour	Run every 'x' hours. Select the days of the week to run and between what times.
Day	Once a day at the time configured in 'Start Time'. Select the days of the week to run.
Week	Run event 'x' weeks at the time configured in 'Start Time'.
Month	Run every 'x' months at the time configured in 'Start Time'. Select the day of the month on which to run the schedule.

The 'End Date' and 'End Time' can be used if required to stop the schedule automatically.

Reports & Filters

Select the report(s) that will be run by the schedule and filter/date range to use for each one. When applying the date range it is advisable to use a contextual date range (this week, last week etc..). If a 'Custom' date range is selected, the date range will be fixed every time the report is run by the scheduler.

Action Specific Information
Enter the information needed for the schedule to email or save the report

Action Type
Control whether the schedule should email the report(s) or save them to a network share

Format
Controls the format the scheduler should use when saving the report(s)

Action Type & Format

Reports can either be saved to a network share or emailed. In addition, the format of the report can be selected. Supported formats are Microsoft Word, Microsoft Excel and PDF.

Emailing Reports

Reports can be emailed to one or more users of the system. Multiple email addresses can be added to any of the address fields (To, CC & BCC) using a comma separated list.

Saving Reports

To save the export to a network share, the details for the network share must first have been configured by the administrator of the system.

Configuration

The title bar provides access to areas of the App Suite. The image below outlines each of the navigation icons:

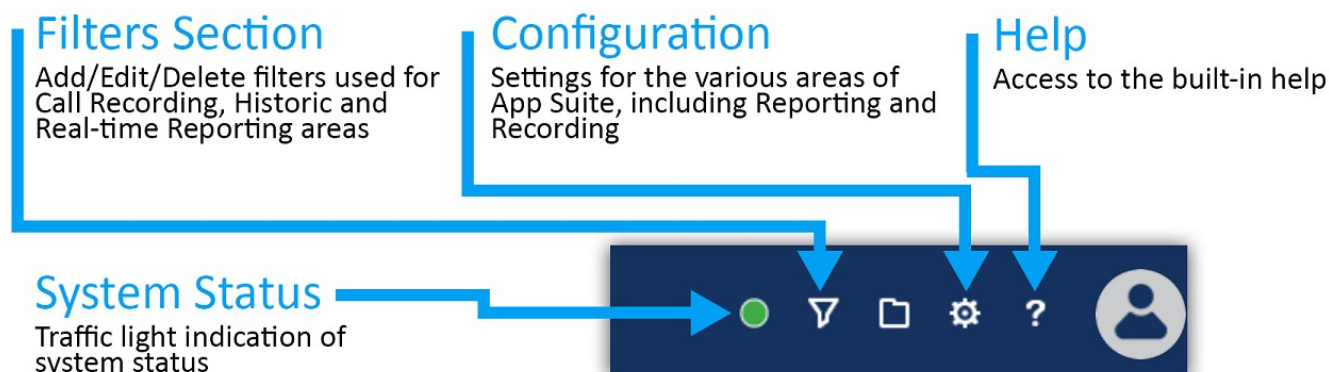

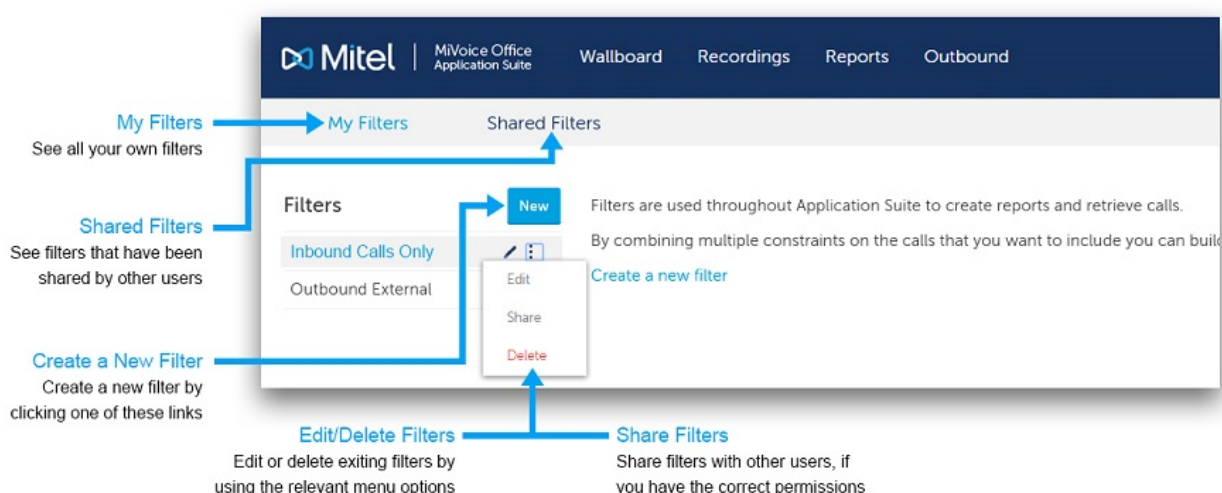

The configuration section and system status will only be visible with the correct permissions.

Filters

The 'Filters' section of the website is used to manage all the saved filters on the system. Filters can be used with reports or recordings.

Each user has their own 'My Filters' section that provides a list of all filters they have created.

Shared Filters (Permission dependant)

Filters can be shared between users to avoid duplicating work and to allow administrative staff to set up filters that can be used by everyone.

Adding / Editing Filters

Each filter provides the ability to search on one or more details about a call. The details are grouped into tabs. The tabs are displayed with descriptions in the image below:

Details
Give the filter a relevant name

Devices
Search for calls made from or received at different devices on the system (See pattern matching options for more information)

Call Details
Search using specific call details such as Outside Number, Direction, Status, DID/DDI..)

Duration
Search for calls using call, ring or talk time duration

Customer Details
Search for calls using contact name, speed dial name and custom tags

Advanced
Search for specific notes on calls, by call Id or using specific properties such as Trunk to Trunk or Service Codes

Special Characters

The use of special characters within the text boxes for a Filter enables the use of complex filter strings.

All Fields

The following characters are supported:

Special Characters	Description
Exclamation mark (!)	Not equal to
Percent (%)	Fuzzy matching (equivalent to a SQL LIKE %)
Underscore (_)	Fuzzy matching of a single character
Comma (,)	Can be used to search for multiple values at the same time

Device Fields

In addition to the special characters above, the following characters are supported when searching using a device based field (Extension, Agent, Trunk, Hunt Group):

Special Characters	Description
Plus sign (+)	Greater than or equal (e.g. 1000+ for extensions greater than or equal to 1000)
Hyphen (-)	Delimits a range of values to match (e.g. 1000-2000 for all extensions between 1000 and 2000 inclusive) or less than or equal to (e.g. -1000 for extensions less than or equal to 1000)

The example below shows what would be matched when entering combining multiple special characters using a comma:

- 1000-1005,!1003,1040,18%5,2000+

Matching endpoints: 1000, 1001, 1002, 1004, 1005, 1040, any that start with 18 and end with a 5, any with a value greater or equal to 2000.

> 📝 Device numbers are stored as text so when using greater than or less than, it is compared on an alphabetic level not a numeric level
