Discontinuation of MSL Qualified Hardware Program

Effective June 30, 2019, Mitel discontinued testing and documenting compatibility of specific server hardware models with Mitel Standard Linux (MSL) and making recommendations. Refer to the **Hardware Compatibility** section of the *MSL Installation and Administration Guide* to select the hardware to run your MSL based applications. This move increases the range of hardware options for Mitel customers, including lower- cost options and servers from additional vendors.

Customers must choose hardware that meets the minimum requirements for the applications it will run. Application hardware requirements are documented in the engineering guide or the installation guide for each application.© Copyright 2019, Mitel Networks Corporation. All Rights Reserved.
